TAYSIDE AND CENTRAL SCOTLAND TRANSPORT PARTNERSHIP

14 JUNE 2022

A NEW REGIONAL TRANSPORT STRATEGY: UPDATE

REPORT BY SENIOR STRATEGY OFFICER

This report updates the Partnership on the development of a new Regional Transport Strategy, the process, work completed to date and the proposed next steps.

1 RECOMMENDATIONS

1.1 That the Partnership:

- (i) notes the process and progress to date in developing a new Regional Transport Strategy for the Tactran partners;
- (ii) endorses arranging workshop sessions for the new Board to discuss work to date, including the issues, objectives, outcomes and options; and
- (iii) approves the arrangement of a special meeting of the Partnership to consider the undertaking of an 'Options Conversation' public engagement exercise.

2 BACKGROUND

- 2.1 Regional Transport Strategies have statutory status, as provided for in the Transport (Scotland) Act 2005. The Act places a duty on constituent Councils, Health Boards and other public bodies to perform their functions which relate to, or which are affected by transport, consistently with their respective Regional Transport Strategy. The Act requires that Regional Transport Partnerships (RTPs) keep their strategies under review.
- 2.2 The Partnership meeting of 15 September 2020 approved the preparation of a new Regional Transport Strategy (RTS) (report RTP/20/32 refers).
- 2.3 The RTS seeks to provide the strategic framework (and associated evidence base) for partners delivery programmes, as well as identifying the processes for taking forward measures which are of a regional significance.
- 2.4 The process of developing the strategy follows the principals of Transport Scotland's <u>Scottish Transport Appraisal Guidance</u> and the Scottish Executive's <u>Guidance on Regional Transport Strategies</u>, namely:
 - Identification of issues, opportunities, constraints and risks
 - Setting of objectives
 - Identification and appraisal of options

- Decision on options and prioritisation, and consultation on strategy
- 2.5 Between June and August 2021 public and stakeholder engagement was undertaken to identify the issues that need to be considered when developing the strategy. This work informed the draft Objectives and Outcomes approved by the Partnership Meeting of 14 September 2019 (report RTP/21/26 refers).
- 2.6 The indicative timescale approved by the Partnership Meeting of 14 December 2021 proposed consultation on the options in the summer of 2022. It is intended that consultation on a draft strategy will occur in the spring/summer of 2023.

3 DISCUSSION

Main Issues

- 3.1 Between September 2020 and March 2021 the main issues were identified with the Partnership Board, Council officers and other key stakeholders. A Main Issues website and Main Issues document were developed and consulted on during Summer 2021. Responses were also sought on a People and Places impact assessment scoping report. A summary of the responses to the consultation can be found in A New RTS January 2022 Update.
- 3.2 Table 1 provides a brief summary of the key issues.

Table 1: Summary of Key Issues

Social, economic and environmental Problems, issues and constraints in the priorities region

CLIMATE CHANGE PLAN

- To phase out the need for petrol and diesel cars and vans in Scotland by 2030
- To reduce car kilometres by 20% by 2030
- Most trips are made by car, not least due to
 - Rural nature of much of the area
 - Few alternatives
- Low % of trips made by low emission vehicles

CLEAN AIR FOR SCOTLAND

To meet national air quality directives

Declared AQMA and LEZ areas

NATIONAL PLANNING FRAMEWORK 4

- Net zero emissions
- Resilient communities
- Wellbeing economy
- Better, greener places
- Much of the Region has higher CO2 emissions per head of population compared to the Scottish average
- Impact of traffic (severance / noise / air quality / safety) on communities
- The resilience of strategic and lifeline routes & services

FAIRER SCOTLAND ACTION PLAN

- To live in vibrant, healthy and safe places and communities
- Communities with poor health
- Road safety (actual and perception)
- Access to health services

Table 1: Summary of Key Issues

Social, economic and environmental priorities	Problems, issues and constraints in the region
 To have a sustainable, inclusive economy with equality of outcomes for all 	Levels of active travel
To have a healthy weight and be physically active	

 FAIRER SCOTLAND ACTION PLAN A Fairer Scotland for All To End Child Poverty 	 Availability and cost of transport to access jobs, education and services The ability of people with disabilities
Fairer Working LivesA Thriving Third Age	to use our transport networks

To stimulate inclusive economic growth To create economic opportunity	 Journey time reliability for business Supporting growth locations & sectors Availability and cost of travel

Draft Objectives and Outcomes

3.3 Informed by the Main Issues consultation, the Partnership Board adopted the draft objectives and outcomes identified in Table 2 below (report RTP/21/26 refers).

Table 2: Draft RTS Obj	Table 2: Draft RTS Objectives and Primary Outcomes	
Objectives (draft)	Primary Outcomes (draft)	
To take climate action	Reduce greenhouse gas emissions	
	Modal shift to more sustainable modes of travel	
	Reduce car mileage	
	Ensure our transport networks are resilient	
To improve health	Reduce fatalities and injuries	
and wellbeing	Improve air quality	
	Improve ability for older people and disadvantaged communities to access healthcare	
	Improve ability for the most vulnerable to access social activities	
	Increase levels of physical activity	
To reduce inequalities	Improve ability for young people, and disadvantaged & rural communities to access jobs, education and services	
	Reliable inter and intra-regional journey times	

Table 2: Draft RTS Objectives and Primary Outcomes			
Objectives (draft) Primary Outcomes (draft)			
To help deliver sustainable, inclusive	Improve ability for young and disadvantaged communities to access jobs, education and training		

- 3.4 The Board will note that the objectives are the same as adopted in Scotland's Second National Transport Strategy. Draft primary and secondary outcomes were developed to identify where activity should be focused to support these objectives. The draft secondary objectives are included as Tables 2-5 in Appendix A.
- 3.5 Following the identification of issues and the adoption of objectives and outcomes, a Strategic Environmental Appraisal (SEA) scoping report (Report RTP/21/32 refers) was submitted to the Scottish Government's SEA Gateway.

Identification of Options

- 3.6 In the first half of 2022, members and Council officers held a number of workshops to identify the range of measures that could help deliver the RTS draft Objectives and Outcomes. These measures have been grouped under the following themes:
 - Improving safety
 - Influencing travel choices and behaviour
 - Improving access to public transport
 - Improving sustainable travel opportunities
 - Improving the accessibility & security of our transport networks
 - Reducing the need to travel by car through the location of development and services
 - Improving strategic connectivity
 - Improving network resilience
- 3.7 Table 6 in Appendix A, provides outlines of the measures that have been identified under these themes.
- 3.8 The workshop discussions highlighted a number of issues that need to be taken into account in the development of the strategy. Not least that the measures are just the potential building bricks for the strategy, and it will be the scale, timing and packaging of the measures that will be critical in what can be achieved and by when.

Proposed conversation about changing how we travel

- 3.9 The process for developing a new RTS proposed an options consultation to understand the views of the public and stakeholders of the potential measures. In addition, the consultation would also allow a number of other key issues highlighted during the options workshops to be addressed.
- 3.10 The scale of change required to achieve the national climate change targets requires significant changes for individuals, businesses and delivery agencies. To be able to achieve this level of change we need to take people and businesses with us. To help achieve this it is proposed that the options consultation helps everyone understand the reasons why the scale of change is proposed, and what change means for everyone. To structure this conversation, it is proposed that the consultation considers the following questions to help understand how we can achieve the targets and what it would mean for people, businesses and the delivery agencies
 - Could business as usual enable us to achieve the climate change and child poverty targets?
 - Could prioritising active and sustainable travel within existing budgets and with existing resources enable us to achieve the climate change and child poverty targets?
 - What is hitting or bettering the interim climate change and child poverty targets by 2030 likely to mean?
- 3.11 Appendix A includes a draft document upon which the engagement exercise is proposed to be based around. An online web version is in development.
- 3.12 It is assumed that the new Partnership Board would wish to understand the issues, objectives & outcomes and options in more detail before approving a public engagement exercise. It is therefore proposed that sessions are offered to members for a 'catch up' before a special meeting of the Partnership considers a consultation exercise.

Next steps

- 3.13 If the Partnership Board approves an engagement exercise to understand what potential measures / approaches mean for people, businesses and the delivery agencies, a consultation will be undertaken in line with a Consultation Strategy included in Appendix B.
- 3.14 The results of this engagement will be reported to the Partnership meeting in December. During that time officers will undertake appraisal of the options to help the Partnership Board consider their preferred approach at the December Partnership meeting. A draft strategy and accompanying People and Place Impact Assessment Reports will be develop for consultation in Spring/Summer 2023.

4 CONSULTATIONS

4.1 This report has been prepared in consultation with the Local Authority transport officers.

5 RESOURCE IMPLICATIONS

5.1 There are no resource implications of this report. Resources to develop a new RTS are included within existing staffing and the RTS revenue budget.

6 EQUALITIES IMPLICATIONS

- 6.1 This report has been screened for any policy implications in respect of Equality Impact Assessment and no major issues have been identified. The process of developing a RTS will include the following impact assessments:
 - Equality and Human Rights Impact Assessment
 - Fairer Scotland Duty Assessment
 - Children's Rights Impact Assessment
 - Health Inequalities Impact Assessment

- A3. References

1 Introduction

A conversation about changing how we travel

Tactran are preparing a new Regional Transport Strategy for the area covering Angus, Dundee City, Perth & Kinross and Stirling Councils.

National targets relating to Climate Change mean we all need to consider how we change when and how we travel.

To inform the draft strategy, which we expect to consult on during 2023, we want to understand how you feel about the measures which could help deliver the national targets and the Regional Transport Strategy's objectives.

The identification of issues, objectives and outcomes

During Summer 2021 we sought your views on the issues that should shape the strategy. These issues then shaped the draft objectives and outcomes for the strategy.

We want your views on whether these objectives and outcomes will help address the key transport related issues in the region.

Potential Measures

We then drafted a list of measures that could deliver these objectives and outcomes.

But the measures alone are just the potential building bricks for the strategy. The scale, timing and packaging of the measures will be critical in what can be achieved and by when.

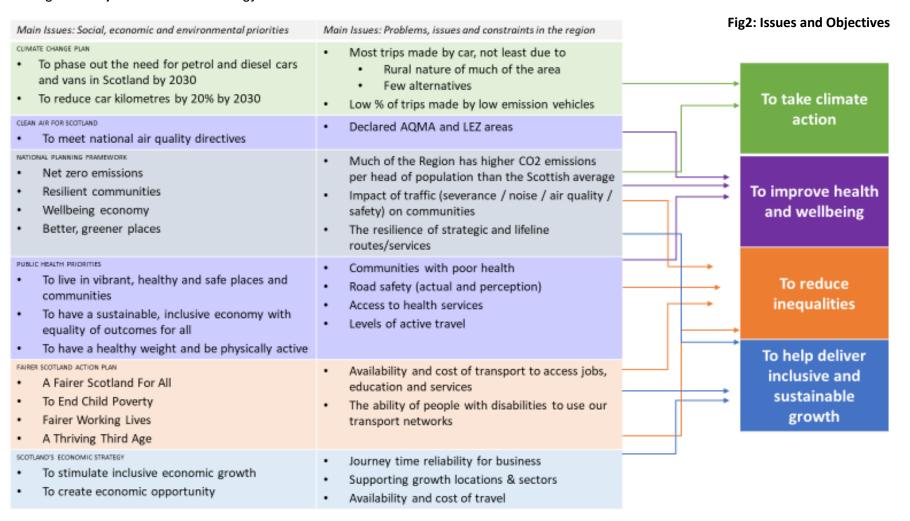

So, we want your views on:

- The scale of change required, and what this will mean for you
- The extent to which individual measures can help deliver the objectives and outcomes, and hence address the issues identified

2 The identification of issues, objectives and outcomes

During Summer 2021 we sought your views on the issues that should shape the strategy. These issues were taken into account in setting the following draft objectives for the strategy

A fuller description of the issues can be found in <u>Main Issues website</u> / <u>Main Issues document</u>. A summary of what you told us about the issues can be found in A New RTS January 2022 Update

Nonetheless, it is useful to remind ourselves of relevant national targets that outline the scale of the challenge.

Decarbonisation of transport: reduce transport carbon emissions by 75% by 2030

- phasing out need for new petrol or diesel light commercial vehicles in public bodies by 2025
- phasing out need for any new petrol or diesel vehicles in public sector fleets by 2030
- phasing out need for new petrol or diesel cars or vans by 2030
- removal of diesel passenger trains from the Scottish network by 2035

Reducing car km

To reduce car km driven by 20% by 2030

Child poverty: by 2030, of children living in Scottish households:

- less than 10% should be living in relative poverty (how many families are on low incomes compared with middle income households) (2021 24%)
- less than 5% should be living in absolute poverty (how many low income families are not seeing their living standards improving over time) (2021 22%)
- less than 5% should be living with combined low income and material deprivation (how many lower income families cannot afford basic necessities) (2021 13%)
- less than 5% should be living in persistent poverty (how many families live on low incomes three years out of four) (2021 16%)

Referring back to the issues across the region, we then identified draft outcomes to focus attention on what actions will help achieve the objectives. Under each primary outcome is nested one or more secondary outcomes to help focus activity on where it is most needed in the Region.

Table1: Draft Objectives and Primary Outcomes		
Objectives (draft)	Primary Outcomes (draft)	
To take climate action	Reduce greenhouse gas emissions	
	Modal shift to more sustainable modes of travel	
	Reduce car mileage	
	Ensure our transport networks are resilient	
To improve health and wellbeing	Reduce fatalities and injuries	
	Improve air quality	
	Improve ability for older people and disadvantaged communities to access healthcare	
	Improve ability for the most vulnerable to access social activities	
	Increase levels of physical activity	
To reduce inequalities	Improve ability for young people, and disadvantaged & rural communities to access jobs, education and services	
To help deliver sustainable, inclusive	Reliable inter and intra-regional journey times	
economic growth	Improve ability for young and disadvantaged communities to access jobs, education and training	

Table2: Climate action	secondary outcomes	
Primary Outcome (draft)	Secondary Outcome (draft)	The scale of issue
1.1 Reduced	1.1.1 Increase the share of EV and low emission vehicle use	Less than 1% of vehicles registered in the Tactran region were electric ¹ (2020)
greenhouse gas emissions	1.1.2 Reduce estimated CO ₂ emissions from transport in the region	Angus, Perth and Kinross and Stirling all have higher per capita transport CO2 emissions compared to the Scottish average ² (2019)
1.2 Modal shift to more sustainable modes of travel	1.2.2 Personal travel: Increase the share of trips made by sustainable modes such as walking, cycling and public transport	60% of trips made by those living in the region are made by car ³ (2019)
	1.2.3 Reducing freight mileage by road	Freight traffic accounts for 26% of the vehicle mileage in the Region (2019) ⁴
1.3 Reduced car km	1.3.1 Reducing the number and/or length of trips by car	In Angus, Perth and Kinross and Stirling, whilst 21%-32% of trips are over 10km, these trips account for 74%-82% of total km. In Dundee 91% of the trips are under 10km (2019) ³
1.4 Ensure our transport networks are resilient	1.4.1 Ensure strategic and lifeline routes (& services) are resilient to climate change and emergencies	37% of the region live in rural areas, most of whom are dependent on strategic routes to access jobs, services and healthcare ⁵ (2016)

Table 3: Improving I	nealth and wellbeing secondary outcomes	
Primary Outcome (draft)	Secondary Outcome (draft)	The scale of issue
2.1 Reduced fatalities and injuries	2.1.1 Improve road safety for vulnerable users	Scotland's Road Safety Framework to 2030 targets pedestrians, cyclists, motorcyclists, road users over 70, 17-25yr olds, children under 16 and people in the lowest 10% SIMD areas
2.2 Reduce the	2.2.1 Reduce transport emissions in declared air quality management areas	Air quality in Crieff, Dundee and Perth City have all exceeded national thresholds resulting in the declaration of air quality management areas, and in Dundee, a Low Emission Zone
impact of traffic on communities	2.2.2 Reduce the impact of traffic on communities on strategic routes	Many communities are sited on trunk roads and regionally significant routes and are subject to the traffic volumes these routes bring ⁶
O O becomes and a bilitary	2.3.1 improve the ability of over 65s to access healthcare (Primary health care /Hospitals)	In Angus, Perth and Kinross and Stirling approximately 10% of the population do not have public transport access to either primary health care or a hospital (2018) ⁷
2.3 Improved ability for older people and disadvantaged communities to	Ability of all in the lowest SIMD datazones (health domain) targeted by the respective Council to access healthcare. See 3.1.2	Most of the areas in the lowest SIMD datazones (health domain) have good access to a hospital. However in Angus approx. 60% of those in the lowest 20% of SIMD datazones are over 60mins travel time to a hospital ⁷
access healthcare	Ability of rural communities to access healthcare. See 3.1.4	Approximately 13% of those living in Perth and Kinross, 10% living in Angus and Stirling, can not access primary health care by public transport (2018) ⁷
2.4 Improved ability for the most vulnerable to access social activities	2.4.1 Ability of rural communities and those in the lowest SIMD datazones targeted by the respective Council to access social activities	

 ⁶ Strategic transport network, <u>RTS 2015-2036 Refresh</u>
 ⁷ Public transport accessibility mapping <u>RTS Monitoring Framework 2018 Progress Report</u>
 ⁸ <u>Mental Health Strategy 2017-2027.</u> The Scottish Government's approach to mental health from 2017 to 2027 – a 10 year vision.

Table 3: Improving I	health and wellbeing secondary outcomes	
Primary Outcome (draft)	Secondary Outcome (draft)	The scale of issue
2.5 Increased levels	SIMD datazones (health domain) targeted by the respective	or to or people in the zote in our depine a diede regularly main de
of physical activity 2.5.2 greer	2.5.2 Improved ability to access active leisure facilities and green space for the lowest SIMD datazones (health domain) targeted by the respective Council	Most of the lowest SIMD datazones are able to access leisure facilities by public transport within an hour (2018) during the day. However the availability of services in the evenings and at weekends are drastically reduced. ⁷

Table4: Reducing inequalities secondary outcomes		
Primary Outcome (draft)	Secondary Outcome (draft)	The scale of issue
3.1 Improved ability for young people, and disadvantaged and rural communities to	3.1.1 Improve ability of young people to access jobs and further education	Across the region just over 30% of 16-24 year olds are not in employment, education or training (2011) ¹⁰ 5.5% of 16-19yr olds are not participating in education, training or employment (2021). ¹¹ 8.3% 16-24 year olds do not have public transport access to further education (2018) ⁷
access jobs, education and services	3.1.2 Improve ability of all in the lowest SIMD datazones (all domains) targeted by the respective Council to access jobs, education and services (inc. healthcare)	36% of the population of Dundee, and 7%, 6% and 12% of Angus, Perth and Kinross and Stirling residents live in the lowest 20% of SIMD datazones (2020) ¹²

Table5: Delivering sus outcomes	tainable & inclusive economic growth secondary	
Primary Outcome (draft)	Secondary Outcome (draft)	Example of the scale of issue
4.1 Reliable inter and intra-regional journey times	 4.1.1 Improve journey times and journey time reliability on strategic road and rail routes for public transport to key destinations (e.g. major centres and economic locations) 4.1.2 Improve journey time reliability for freight to key destinations (e.g. major centres and economic locations / air and sea ports) 	
4.2 Improved ability for young people, and disadvantaged and rural communities to access jobs, education and training	See 3.1.1 – 3.1.5	ā above

¹⁵ Performance & Reliability | Public Performance Monitoring | ScotRail Scottish Transport Statistics 2020

Question 1: Will the proposed objectives and outcomes help address the issues identified?	Strongly Agree	Agree	Neither agree / disagree	Disagree	Strongly disagree	
Do the objectives help support the issues identified? (see Fig 2)						
Would the outcomes focus activity where progress is most required?						
Which of the objectives and/or outcomes do you feel are the most important to deliver?						
If you disagree with any of the objectives or outcomes, please tell us which ones						
Do you think that there are any important transport related issues that the objectives or outcomes do not address? If so, please tell us.						
Any other comments?						

3 The Scale of Change Required

Having adopted draft objectives and outcomes, a list of measures was drafted that could deliver these outcomes.

But the measures are just the potential building bricks for the strategy. The scale, timing and packaging of the measures will be critical in what can be achieved and by when.

So, we want your views on the pros and cons of:

- The scale of change required, and what this will mean for you.
- What measures could bring about the change required? And what they will mean to you.

3.1 What scale of change is required and what does it mean for you?

The scale of change required to achieve the national and local climate change aspirations requires significant changes for individuals, businesses, the Councils and other delivery agencies, in how we travel and service provision. The following questions seek to start a conversation of how we can achieve the targets and what it would mean for people, businesses and the delivery agencies including the Councils.

The scale of the challenge we need to address could be reduced or increased subject to external events such as:

- Economic busts and booms...influencing the pace, capacity and willingness for change, as well as the demand for travel
- Technological advancements, enabling society to do things differently
- Public policy responding to economic (e.g. reductions in fuel duty),
 environmental (climate change) or social (cost of living or child poverty) priorities
- The future of public transport (bus and rail), and whether there are national responses to the issues that public transport is facing

If or when any of these events occur, we will revisit the RTS delivery programme to delay or bring forward measures as appropriate

3.1.1 Could business as usual enable us to achieve the climate change and child poverty targets?

Significant active travel projects are being delivered in some of our towns and cities. Local Authorities are continually reviewing how to get the most out of available budgets to support and integrate the public transport options which are available to people.

However, this level of activity is unlikely to be supported by the mechanisms and funding that would provide the active and sustainable travel networks / services required to encourage and ensure significant behavioural change to enable society to hit the interim climate change and child poverty targets by 2030.

3.1.2 Could prioritising active and sustainable travel within existing budgets and with existing resources enable us to achieve the climate change and child poverty targets? What changes are required to enable us to maximise existing resources? Partners could potentially squeeze more active and sustainable travel delivery through improved co-ordination across

all programmes (and across partner programmes) and a concerted focus on delivering improvements only where they will have the greatest impact on respective targets. However:

• There remains little discretionary spend to target significantly more activity at active and sustainable travel due to the pressures of maintaining and safely operating existing assets

- Limited improvements would be able to be made on providing public transport choices for people not in commercially viable corridors
- More demand management could be undertaken, but politicians are understandably reluctant to introduce restrictions when there are not considered to be reasonable alternatives, and where proportionate restrictions are not applied across a wider area
- Can we do more within existing parameters, such as greater collaboration, and if so, why isn't this already being done?

Accordingly, there is significant risk in achieving the targets by 2030 if we simply working within current parameters.

3.1.3 What is hitting or bettering the interim climate change and child poverty targets by 2030 likely to mean?

To achieve a step change in sustainable transport choices by 2030 and ensure:

- People have the choice to make fewer trips by using technology to reduce the need to travel
- People have confidence that they can make car based trips by low emission vehicles and reduce car mileage by making most trips by sustainable modes. Our settlements are healthier places to live....by being less congested, where people are able to access more services locally by walking and cycling
- That everyone has transport opportunities to access jobs, education and services; and that people can easily access public transport to get to, from and between the major centres
- Journey times between centres will be reliable due to less congestion and more resilient networks

Then a step change in delivery and behaviour is required. This is likely to mean:

- Significant change in travel habits for individuals and businesses. This is likely to require significant behavioural change campaigns
- Additional finances (public and private) must be found to improve active travel opportunities and public transport services which enable people to switch from the car
- It is unlikely that carrots alone will encourage a sufficient modal shift, and demand management measures that reflect people's realistic choices, will be required. This is likely to require disincentivising private car use by those who have alternative travel options
- The location of new development must not be car dependent so as not to add to the problem. All public agencies will also have to consider how to provide services within liveable / 20min neighbourhoods to reduce travel and improve access for everyone
- To maximise available resources, greater collaboration and maximising the co-ordination of partner activities is required
- Commercial public transport services alone may not sufficiently support both modal shift and social inclusion objectives. Local authorities may need to consider powers available in the Transport (Scotland) Act 2019. Alternatives to providing subsidised public transport should also be considered, for example, empowering remote communities to develop and deliver their own transport solutions aligned to their needs.

This is a step change in activity for many transport and public service partners, and there is an urgency behind the changes if the interim 2030 targets are to be hit or bettered. Accordingly, this level of change would require strong and declared political support.

Only then, would we be on track to deliver the long-term net zero greenhouse emissions.

Question 2: Do you support the general approach outlined in 3.1.3 to hit or better the interim climate change and child poverty targets by 2030?	Strongly Support	Support	Neither support / object	Object	Strongly object
If you object to the approach, why?					
What impact would this approach have on you or your organisation?					
Is there anything else that we should consider when finalising our approach?					
Any other comments?					

4. What measures could bring about the change required?

4.1 Summary of potential measures

Subject to the strategy approach that is adopted, the final strategy will be delivered by more, or less, of the measures identified in Table 6 below.

Table 6: Summary of Potential Measures	
Improving safety	Reduce speeds Provide road safety education Improving rest and welfare facilities for hauliers
Influencing travel choices and behaviour	Promoting smarter choices Parking controls, road space re-allocation and traffic management Road user charging
Improving access to public transport	Improved public transport interchange New and improved rail and bus stations Easier planning and booking of journeys
Improving sustainable travel opportunities	Improving active travel opportunities Improving active travel to school Improving public transport Demand responsive, community and shared transport services Promote Fair Fares
Decarbonising transport and a just transition	Promoting and enabling electric and low emission vehicles for individuals, public sector, business and bus & coach fleets Rail decarbonisation Behaviour change and modal shift for freight

Table 6: Summary of Potential Measures	
Improving the accessibility & security of our transport networks	Improved accessibility & security of the street environment Improved accessibility & security for all across public transport
Reducing the need to travel by car through the location of development and services	Reduce car dependency of new developments Locate new and existing services within communities Measures in neighbouring authorities that could reduce car use
Improving strategic connectivity	Address pinch points on strategic roads Improve rail connectivity Improve connectivity to freight destinations Improve access to airports
Improving network resilience	Improving network resilience

A detailed description of the individual measures covered by these themes is contained in <u>Annex A1</u>. Your views on the potential measures would be welcomed, including:

- Whether the measures would have either a positive or negative impact on how you travel?
- Whether you think these measures will help support the identified objectives and outcomes; or where you think these measures should be targeted

4.2 Which measures will help deliver which objective?

Table 7 below indicates which measures are most likely to support which objectives and outcomes. <u>Annex A2</u> indicates which measures are most likely to have a positive impact on the objectives and outcomes of the RTS in differing locales across the region.

Table 7: Which measures will help deliver which objective?

Improved ability for the mos vulnerable to access social activities

	To take climate action	Reduced greenhouse gas emissions Modal shift to more sustainable modes of travel	Improving access to public transport: Improved public transport interchange; New and improved rail and bus stations; Easier planning and booking of journeys			
		Reduced car mileage	Improving choice and opportunities: Improving active travel opportunities; Improving active travel to school; Improving public transport; Promote fair fares			
		Ensure our transport networks are resilient	Decarbonising transport and a just transition: Development of electric and hydrogen vehicle charging and refuelling networks; Promoting and supporting a just transition to zero emission vehicles; Rail decarbonisation; decarbonisation of bus networks; Behaviour change and modal shift for freight			
			Improving network resilience			
			Influencing travel choices and behaviour: Promoting smarter choices; Parking controls, road space re-allocation and traffic management; Road user charging			
			Reducing the need to travel by car through the location of development and services: Reduce car dependency of new developments; Locate new and existing services within communities			
		D 1 16 (19)				
		Reduced fatalities and injuries Reduce the impact of traffic on communities	Improving safety and security: Reducing speeds; Road safety			
	To improve health and wellbeing	Improved ability for older people and disadvantaged communities to access healthcare	education; Improving rest and welfare facilities for hauliers Improving choice and opportunities: Improving active travel opportunities; Improving active travel to school			
		language of the language of the contract				

the most

	Increased levels of physical activity					
To reduce inequalities	Improved ability for young people, and disadvantaged & rural communities to access jobs, education and services	Improving access to public transport: Easier planning and booking of journeys Improving choice and opportunities: Demand responsive community and shared transport Services; Fares Improving the accessibility & security of our transport networks: Improved accessibility & security of the street environment; Improved access for all across public transport Reducing the need to travel by car through the location of development and services: Reduce car dependency of new developments; Locate new and existing services within communities				
To help deliver sustainable, inclusive economic growth	Reliable inter and intra-regional journey times Improved ability for young and disadvantaged communities to access jobs, education and training	Improving strategic connectivity Address pinch points on strategic roads; Improve rail connectivity; Improve connectivity to freight destinations; Improve access to airports Improving choice and opportunities: Demand Responsive, Community and shared transport services; Promote fair fares; Improving public transport				

5. Next steps

5.1 How are we going to assess measures?

Your views on the scale of change and the individual measures, will inform the next stage of the work. This will culminate with reporting to the Tactran Partnership on:

- The likely acceptability of measures
- The extent to which measures are likely to deliver the objectives and outcomes identified. This will follow the principles set out in Transport Scotland's 'Scottish Transport Appraisal Guidance' and consider:
 - o how the measures will help achieve Draft RTS Objectives and Outcomes
 - o deliverability of the measures

This work will also consider how the measures align with the National Transport Strategy's mode & investment hierarchies

- the impact that measures may have on people and place. This will be considered in Impact Assessments that consider
 - o Place, incorporating a Strategic Environmental Assessment
 - o People, incorporating
 - Equality and Human Rights Impact Assessment
 - Health Inequalities Impact Assessment
 - Child Rights and Wellbeing Impact Assessment
- Where measures are most likely to have the most positive impact on the objectives and outcomes

This work will assist the Partnership identified a preferred approach which will be incorporated in a draft strategy

5.2 Timescales for consulting on a draft Regional Transport Strategy

To be determined following approval of Partnership to undertake 'A Conversation About Change'

What are your views on the potential measures?

Improving safety

Reduce speeds	(i) Reducing speeds in settlements
	Expansion of 20mph limits and zones
	 Review speed limits in residential and neighbourhood environments focusing on areas with road safety concerns
	 Other localised safety schemes such as traffic calming measures and road / junctions realignments and redesigns
	(ii) Addressing network blackspots
	Review speed limits
	Road / junction realignments and redesigns
	(iii) Road safety enforcement, including enforcement of speed restrictions via camera technology
Provide road safety education	Education measures, which include training and publicity, aiming to provide road users with the knowledge and skills needed to use the roads safely. Focused on:
	(i) Road safety education pre-school, primary and secondary schools
	(ii) Road safety education for adults, such as drivers
	(iii) Road safety education for 17-25yr olds
Improving rest and	Increase the range of rest facilities within the region available to drivers
welfare facilities for hauliers	Freight is still predominantly road-based with most drivers regularly traveling long distances. Without sufficient rest, drivers can experience fatigue which can be dangerous for themselves and other road users.

Strongly Agree	Agree	Neither agree / disagree	Disagree	Strongly disagree
			Agree agree /	Agree agree /

Which of these measures would have either a positive or negative impact on how you travel?

Any other comments? (e.g. do you think these measures will help support the identified objectives and outcomes; where do you think these measures should be targeted?)

Influencing travel choices and behaviour

Promoting Smarter Choices	(i) Campaigns to promote active and sustainable travel in Travel to Work Areas (ii) Develop and deliver Travel Plans and School Travel Plans (iii) Promoting LiftShare / Ride Sharing schemes
Parking controls, road space re- allocation and traffic management	The attractiveness of car use compared to public transport and active travel modes can be influenced by: (i) Workplace Parking Levy / Congestion Zone Charging (ii) Public parking charges (iii) Reallocation / Reduction of the numbers of both on-street and off-street parking spaces within town centres (iv) Reallocation of carriageway, giving more space to active and sustainable modes (v) Re-routing motorised traffic on longer and/or less direct routes for the benefit of the wider network
Road User Charging	Road users could be charged either for the length of trip made or for entering a specific area, such as a city centre, to encourage the use of sustainable modes to make the trip

Q4. Influencing travel choices and behaviour: Do you agree or disagree that these measures could encourage sustainable travel behaviour?	Strongly Agree	Agree	Neither agree / disagree	Disagree	Strongly disagree
Promoting Smarter Choices					
Parking controls, road space re-allocation and traffic management					
Road User Charging					
Which of these measures would have either a positive or pegative impact on how yo	u travel?				

Which of these measures would have either a positive or negative impact on how you travel?

Any other comments? (e.g. do you think these measures will help support the identified objectives and outcomes; where do you think these measures should be targeted?)

Improving access to public transport

Improved public transport	(i) Strategic Park and Ride sites to transfer to coach or rail those long-distance car trips heading to Scotland's cities outwith the region					
interchange	(ii) Local Park and Choose sites to provide interchange facilities at railway stations, bus stations and on public transport corridors serving towns to enable transfer to train, bus or bike into our larger towns and cities					
	(iii) Mobility Hubs link a number of transport services within a community to improve access via different modes to enable your onward journey. This usually means improving the ability to access bus services by, e.g. car and bicycle parking; bike hire; walking and cycling links; demand responsive bus services. But they could also help accessing car club & car sharing facilities.					
	(iv) Passenger facilities along strategic bus corridors: ensuring accessible waiting facilities with information along strategic bus corridors					
New and improved	(i) New and improved bus stations					
rail and bus stations	(ii) New and improved rail stations on existing lines					
Easier planning	(i) Journey planning tools to help people be aware of all the choices they have to make a journey					
and booking of journeys	(ii) Smart and integrated ticketing whereby tickets are stored electronically, usually on a smart card or other forms of smart media, enabling a person to use a single 'ticket' on different modes of transportation, such as bus and rail, or across different operators.					
	MaaS products can provide both improved journey planning and provide smart, integrated ticketing					

Q5. Improving access to public transport: Do you agree or disagree that these measures could help make it easier to access bus or rail services?	Strongly Agree	Agree	Neither agree / disagree	Disagree	Strongly disagree
Improved public transport interchange					
New and improved railway and bus stations					
Easier planning and booking of journeys					

Which of these measures would have either a positive or negative impact on how you travel?

Any other comments? (e.g. do you think these measures will help support the identified objectives and outcomes; where do you think these measures should be targeted?)

Improving sustainable travel opportunities

Improving active	(i) Connected neighbourhoods, enabling people to access local facilities by walking and cycling
travel opportunities	(ii) Active freeways, cycle priority routes into our town and city centres
Срропшинос	(iii) Strategic active travel network, providing village-town active travel connections; connecting towns by active travel; and supporting the long-distance active travel network
	(iv) Ensuring secure cycle parking at homes, workplaces, schools, interchanges and other destinations
	(v) Cycle hire schemes, increasing the number of conventional and electric cycle hire scheme
Promoting active and sustainable	(i) safer routes to schools - improving walking and cycling routes to schools, including reducing traffic speeds around schools
access to schools	(ii) school exclusion zones - limiting traffic around schools at peak times to improve safety and air quality for children
	(iii) cycle parking; cycle training and improving access to bikes
Improving public transport	(i) Strategic Bus Priority Corridors, improving journey time and reliability through bus priority measures, traffic management etc.
	(ii) Increasing Bus Services, improving the frequency and coverage of public transport through fixed routes and feeder services (including DRT and Community Transport)
	(iii) Improved rail services
Demand Responsive, Community and shared transport Services	(i) Demand Responsive Transport (DRT): on demand (rather than timetabled services) to link to existing traditional fixed route bus services, and to cover areas where fixed route services are not viable
	(ii) Community Transport Services: Support for community and volunteer transport services
	(iii) Car Clubs: to provide access to a car without the need to own one
Promote Fair Fares	Fare structures are typically set in a way to make travel during peak times more expensive, with off-peak travel fares offered at lower rates.
	Encourage & support public transport providers to review fares to:

(a) enhance social inclusion by providing a realistic alternative to a wider range of people, including disadvantaged communities
(b) help balance demand for public transport throughout the day and reduce pressure on services at peak times

Q6. Do you agree or disagree that these measures could help improve your transport choices & opportunities?	Strongly Agree	Agree	Neither agree / disagree	Disagree	Strongly disagree
Improving active travel opportunities					
Promoting active and sustainable access to schools					
Improving public transport					
Demand Responsive, Community and shared transport Services					
Promote Fair Fares					

Which of these measures would have either a positive or negative impact on how you travel?

Any other comments? (e.g. do you think these measures will help support the identified objectives and outcomes; where do you think these measures should be targeted?)

Decarbonising transport and a just transition

Promoting and enabling electric and low emission vehicles for individuals, public sector, business and bus fleets	(i) Supporting electric vehicle uptake through adoption of Ultra Low Emission Vehicles (ULEV) in public sector, business and bus fleets; and supporting a just transition through the availability of electric vehicles through car clubs and parking and charging tariffs (ii) Developing charging infrastructure through deployment and maintenance of public infrastructure; home charging and fleet charging (iii) Promoting electric mobility, communicating the benefits of low emission vehicles
Rail Decarbonisation	Support the decarbonisation of the rail network by 2035 through (i) Electrification of Dunblane to Perth / Dundee / Aberdeen (ii) Battery Electric Trains from Edinburgh to Perth / Dundee (short term) (iii) Electrification from Edinburgh to Perth / Dundee (long term) (iv) Electrification from Perth to Inverness (cp. STPR2) (v) Battery Electric Trains on the West Highland Line
Behaviour change and modal shift for freight	Freight transfer and consolidation hubs within the region to reduce road freight and also allow freight to be moved by rail and water (i) Freight hubs (ii) Timber transfer facilities (iii) Consolidation centres (iv) First and last mile distribution services, such as vans, drones, cargo bikes etc.

Q7. Decarbonising transport and a just transition: Do you agree or disagree that these measures could help decarbonise transport?	Strongly Agree	Agree	Neither agree / disagree	Disagree	Strongly disagree
Promoting and enabling electric and low emission vehicles for individuals, public sector, business and bus fleets					

Rail Decarbonisation			
Behaviour change and modal shift for freight			

Which of these measures would have either a positive or negative impact on how you travel?

Any other comments? (e.g. do you think these measures will help support the identified objectives and outcomes; where do you think these measures should be targeted?)

Improving the accessibility & security of our transport networks

Improved accessibility &		on seeks to make our settlements places where everyone, especially people with mobility difficulties, can ly and easily walk, cycle or wheel around
security of the street environment	(i)	Step free routes and appropriate crossing facilities, informed by accessibility audits around the 20min neighbourhoods
	(ii)	Seating
	(iii)	Lighting and reviewing the design of the public realm to improve security
	(iv)	Signage and wayfinding
	(v)	Number and location of disabled car parking spaces
	(vi)	Reducing severance & improving active travel on trunk roads through communities
	(vii)	Promoting changes to our transport networks to people with learning difficulties

Improved
accessibility &
security for all
across public
transport

Improving access for all public transport users and particularly for those who are mobility impaired, including:

- (i) Improvements at interchanges, step free access, improved seating, improved lighting, security improvements
- (ii) Improved accessibility of buses and trains
- (iii) Improved information provision for people with mobility issues/passes
- (iv) Assistance to public transport users

Q8. Improving the accessibility & security of our transport networks: Do you agree or disagree that these measures could help improve accessibility and security?	Strongly Agree	Agree	Neither agree / disagree	Disagree	Strongly disagree
Improved accessibility & security of the street environment					
Improved access &security for all across public transport					

Which of these measures would have either a positive or negative impact on how you travel?

Any other comments? (e.g. do you think these measures will help support the identified objectives and outcomes; where do you think these measures should be targeted?)

Reducing the need to travel by car through the location of development and services

Reduce car dependency of new developments	Reduce car dependency of new developments by (i) development plans promoting land use patterns that reduce the need to travel, and enable travel by sustainable modes (ii) the development management process ensuring that new development is realistically accessible by a range of modes
Locate new and existing services within communities	locate new and existing services within communities - all public services to work together to improve the range of local services that can be available at a neighbourhood level to support the 20min / liveable neighbourhood principle
Measures in neighbouring authorities that reduce car use	The ease and ability to make many trips will be influenced by the sticks and carrots being applied in neighbouring areas. Where applicable we could work with neighbouring authorities on measures that can reduce the number of vehicular trips

Q9. Reducing the need to travel by car through the location of development and services: Do you agree or disagree that these measures could help reduce the need to travel?	Strongly Agree	Agree	Neither agree / disagree	Disagree	Strongly disagree
Reduce car dependency of new developments					
Locate new and existing services within communities					
Measures in neighbouring authorities that could reduce car use					
Which of these measures would have either a positive or negative impact on how you travel?					

Any other comments? (e.g. do you think these measures will help support the identified objectives and outcomes; where do you think these measures should be targeted?)

Improving strategic connectivity

Address pinch points on strategic	Measures focused on road improvements on the key strategic network within the region, focussed on improving journey time reliability and road safety.
roads	(i) Kingsway Dundee A90/A972
	(ii) Broxden and Inveralmond, A9 Perth
	(iii) Craigforth, M9 Stirling
	(iii) Grade separation of the A9 between Kier and Inverness (Kier, Auchterader)
	(iv) Dualling of the A9 north of Perth
	(v) A82 Inverannan – Tarbert
Improve rail connectivity	(i) Physical and operational improvements to reduce journey times and improve resilience of routes from and through the region to/from Edinburgh; Glasgow; Aberdeen; Inverness; including
	Highland Mainline rail corridor enhancements
	Perth-Dundee-Aberdeen rail corridor enhancements
	Edinburgh/Glasgow – Perth/Dundee rail corridor enhancements
	(ii) Improved frequency and capacity of services to Edinburgh and Glasgow, including consideration of intermediate stations;
	(iii) improve resilience of West Highland line

Improve connectivity to freight destinations	(i) Improving journey time reliability to major freight destinations (ii) Improving freight capacity on the rail network
Improve access to airports	Promoting sustainable access between the region and Scotland's airports

Q10. Improving strategic connectivity: Do you agree or disagree that these measures could help improve between the region and the rest of Scotland?	Strongly Agree	Agree	Neither agree / disagree	Disagree	Strongly disagree
Address pinch points on strategic roads					
Improve rail connectivity					
Improve connectivity to freight destinations					
Improve access to airports					

Which of these measures would have either a positive or negative impact on how you travel?

Any other comments? (e.g. do you think these measures will help support the identified objectives and outcomes; where do you think these measures should be targeted?)

Improving network resilience

Improving Network Resilience	To maintain a transport network within the region which is resilient to disruptive events resulting from the increased risk of extreme weather and flooding, maintaining access for people and resources				
	(i) Winter maintenance				
	(ii) Diversion routes				
	(iii) Protection of vulnerable sites to flooding / landslips				
	(iv) Meet environmental standards in construction and maintenance				
	(v) Blue-Green Infrastructure				
	(vi) Strategic road renewal for reliability, resilience and safety				

Q11. Improving network resilience: Do you agree or disagree that these measures could help make our transport networks more resilient?	Strongly Agree	Agree	Neither agree / disagree	Disagree	Strongly disagree
Improving Network Resilience					

Which of these measures would have either a positive or negative impact on how you travel?

Any other comments? (e.g. do you think these measures will help support the identified objectives and outcomes; where do you think these measures should be targeted?)

Which measures are most likely where I live?

Whilst most transport problems will occur in most areas, the relative importance of problems will vary between according to where we live or work. Hence, some measures are more applicable in urban areas, and some in rural areas. The tables below intend to give a feel for the types of interventions most likely in rural and urban areas, and along strategic corridors to help identify those measures most likely for where you live.

Urban Areas	Improving safety: Reduce speeds / Provide road safety education
Arbroath	Influencing travel choices and behaviour: Promoting smarter choices / Parking controls, road space re-allocation and traffic management / Road user charging
Dundee Forfar	Improving access to public transport: Improved public transport interchange / New and improved rail and bus stations / Easier planning and booking of journeys
Montrose Perth Stirling (inc Bridge of Allan)	Decarbonising transport and a just transition: Promoting and enabling electric and low emission vehicles for individuals, public sector, business and bus fleets / Rail decarbonisation / Behaviour change and modal shift for freight
	Improving the accessibility & security of our transport networks: Improved accessibility & security of the street environment / Improved accessibility & security for all across public transport
	Improving strategic connectivity: Address pinch points on strategic roads / Improve rail connectivity / Improve connectivity to freight destinations
	Improving network resilience
